Room 200
Chicago, IL 60602

Dear Aldermen Burke and Burns:

The Consumer Healthcare Products Association (CHPA) takes this opportunity to respectfully express our opposition to proposed Ordinance #02013-1063, a measure proposing to ban the sale of products containing triclosan in the City of Chicago. CHPA is the national trade association representing the leading manufacturers and distributors of over-the-counter (OTC) medicines and dietary supplements in the United States. CHPA believes that banning the use of triclosan in OTC products will negatively affect the health of city residents.

Triclosan is found in a wide variety of personal care products, including antibacterial hand washes and dental care products and has been used safely as an antimicrobial ingredient for more than 40 years. Millions of consumers utilize triclosan-containing products safely and effectively as part their daily hygiene routines in homes, hospitals, doctors’ offices, day care centers, nursing homes, and office and institutional settings.

Depending on its intended use as an OTC drug product or cosmetic, triclosan is regulated in a number of different ways. OTC drug products containing triclosan are regulated for safety and efficacy either under the Food and Drug Administration’s (FDA) monograph system (for antibacterial hand wash products)\(^1\) or, in the case of Colgate Total toothpaste, as an approved New Drug Application.\(^2\)

Total toothpaste is clinically proven to reduce the bacteria and plaque that can lead to gingivitis. If left untreated, gingivitis can progress to periodontitis, a more serious and damaging stage of infection and resulting gum inflammation. Colgate Total provides both anti-bacterial and anti-inflammatory benefits. With the growing body of science linking oral health to overall health, this is an important advantage. Antibacterial hand wash products with triclosan reduce or

\(^2\) FDA reviewed data on the safety and efficacy of triclosan in Colgate Total toothpaste in 1997 and found it to be both safe and effective for the treatment of gingivitis.
eliminate pathogenic bacteria on the skin to a significantly greater degree than plain soap and water.3

A number of scientific, transparent, and risk-based analyses have confirmed the safety of triclosan for its intended uses.4,5 Moreover, studies on triclosan and antimicrobial resistance have found no data linking outbreaks of antimicrobial resistant human and zoonotic pathogens to triclosan exposure6 and found that the use of antibacterial wash products in the home setting does not contribute to antibiotic resistance.7

CHPA thanks you for your consideration of these comments in opposition to proposed Ordinance #O2013-1063. I am more than happy to speak with you in greater detail about this issue. Please feel free to contact me at your convenience.

Best Regards,

Carlos I. Gutiérrez
Director, State Government Relations
