OTC Single-Ingredient Pediatric Liquid Acetaminophen Concentration Chart

On May 4, 2011, the OTC medicine industry in the United States announced plans to offer one concentration of single-ingredient liquid acetaminophen for children in the future. The voluntary transition to one liquid concentration will start in mid-2011. After the transition, the infant's product will have the same concentration (160 mg / 5 mL) and dosing directions as the children's product.

The chart below explains the product concentrations and labels currently available and what will change.

<table>
<thead>
<tr>
<th>Type of Liquid Product</th>
<th>Dosing Directions</th>
<th>Current Concentration</th>
<th>New Concentration</th>
<th>Dosing Devices</th>
</tr>
</thead>
</table>
| Infants’               | • <2 years of age, ask a doctor  
                          • 2 – 3 years, doses included by age and weight (as preferred dosing) | Current: 80 mg / 0.8mL or 80 mg/1 mL | • 160 mg / 5 mL | • New dosing syringes  
                          • Flow restrictors |
| Children's             | • 2-11 years Doses included by age and weight (as preferred dosing) | Current: 160 mg / 5 mL | • 160 mg / 5 mL | • Continue to have dosing cups |

The following companies are part of this transition:
- Aaron Industries
- AccuDial Pharmaceutical
- Actavis
- GlaxoSmithKline
- McNeil Consumer Healthcare
- Novartis Consumer Healthcare
- Perrigo Company
- Prestige Brands Holdings
